Shop-2200 Sq. Ft.

Office-200 Sq. Ft.

Inspection-150 Sq. Ft.

We believe that the quality of a shop is measured by its ability to provide quality parts with on time deliveries, and at Eastern we strive to provide this measure of quality with each and every job that we receive.

Our Quality Assurance program complies with MIL-I-45208A in an effort to provide all our customers with a quality control system that prevents defects rather than finding them. This provides us with the ability to produce quality parts in conjunction with on time or just in time deliveries, coupled with ship to stock practices, on a continuing basis.

We continue to be cost conscious and see this as a vital need of our customers and seek to reduce cost of manufacturing both in house, and through suggestions to our customers when deemed appropriate, but never at the expense of either quality or delivery.

At Eastern we continue to invest in manufacturing and quality control in an effort to continue our commitment to you our customers, to provide excellence in craftsmanship at competitive pricing and in response to our customers needs.

Sincerely,

James Long
